

Project 06/2014

- Machine type: Travelling column machining centre VSC 3
- Application: Processing of mineral cast basin
- Task: Drilling and milling of cast basin after automated loading by robot
- Solution: Swivelling table solution - the working space will be completely rotated for loading and unloading.
Due to this feature the machining centre is much shorter than other double place machining centres with side-by-side editing.
- Special feature:
- space-saving swivel table solution, which enables the processing of a workpiece during the next workpiece is prepared on the back
 - pure water cooling, no use of cooling lubricants
 - to avoid corrosion the working space is lined with stainless steel
